

Allergy Shots Video Transcription

Hello I'm a patient here at ENT Canton. I've been receiving allergy shots for about a year and a half now. Before I started taking allergy shots, I would have sinus infections, bronchitis probably 4-5 times a year... and since I've been taking the shots, this year I've been seen once by a doctor for similar symptoms. So, I feel like they really help. They've cut down my sinus issues, my allergies, and everything significantly. It's made a big difference in my winter months, which is when I get sick. They don't hurt, it's not bad. I've never had a reaction. You're here for all of 20 minutes when you come in.
