

## Balloon Sinuplasty Transcription

Hi I'm a patient of Dr. VanTuyl here at ENT Specialists, and a week ago I had a procedure called Balloon Sinuplasty. Before the procedure, and before finding this facility and Dr. VanTuyl, I had suffered from intense pain, not only in my face and in my sinuses, but in my neck in my back and down my arm. It was so debilitating and I was misdiagnosed several years ago. I haven't been able to work in about 3 years, and I knew there had to be a root cause, something different than what I was diagnosed with. I'm so blessed that I finally found this facility. This is a huge turning point in my life. I wasn't able to smile a week ago because my face hurt so badly. I didn't even think about the pain, the team was so great. I just started praying, laid my head back. They played music for me, if I had any questions the nurses, the team, and of course Dr. VanTuyl kept me informed throughout the whole procedure, and they kept me distracted from what was going on so honestly I didn't even think about the pain. They reassured me completely.

The last week has not been bad at all. They gave me clear instructions and I've been following them. I feel like a new person, like I finally have my life back. I'm just so grateful for everyone here, it just feels so blessed that finally after 25-30 doctors, I found a facility that healed me, and that I can smile because A: I'm happy and B: it doesn't hurt to. So, thank you so much to the team and I highly suggest this facility and this procedure if you meet the qualifications. Mine was one of the more intense cases as well, and I was able to get through it. Here I am a week later and I just couldn't be happier
